Art Unit: 1714

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-61 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO

95/17475 Johnson in combination with US Pat. No. 5601878 Kranig et al..

Johnson discloses the instantly claimed color effect providing pigments. They inorganic coating thereon will necessarily have the instantly claimed index of refraction because the coatings are the same as those of the instant claims. Johnson differs from the instantly claimed invention in that he does not disclose the pigment's use in powder coatings, as required by the instant claims. It would have been obvious to one of ordinary skill in the art at the time of the instant invention to use the instantly claimed pigments in the instantly claimed powder coatings to achieve the color effects of the instantly claimed pigments because Johnson describes the effects of the instantly claimed pigments and these same effects would have been expected in a coating film obtained by a powder coating because pigments give similar effects whether used in powder, dispersion, or solution coatings and pigmenting powder coatings with conventional pigments, including metallic flakes is well known, as shown by the claims of Kranig et al.
